SKILLS

- **Programming Languages:** Java, JavaScript, C#, C++, Solidity (Web3)
- **Web Technologies:** RESTful APIs, .NET Core, Spring Boot, React.js, Express.js, Node.js
- **Core Concepts:** OOPS, OS, Network, DBMS, DSA
- **Databases:** SQL (DBMS), MongoDB
- **Tools/IDE:** Git, GitHub, Visual Studio, Visual Studio Code, IntelliJ, Postman, Linux,

EXPERIENCE

❖ Intern (Backend Developer) | Webito Infotech (Jan 2025)

- Worked on backend development using **Node.js, Express.js, and MongoDB** within the **MERN stack**, collaborating with frontend (React.js).
- Built and maintained **RESTful APIs** for systems like Railway Booking and Worker Services platforms.
- Designed **MongoDB schemas** and applied efficient data modeling and DBMS concepts.
- Implemented **authentication & authorization** using JWT and RBAC.
- Handled **API integration, testing, debugging, and performance optimization**.
- Collaborated in an **Agile team environment** to deliver features on time.

ACADEMIC PROJECTS

❖ Oatly - Plant-Based Dairy Milk Product Store

- Built a **full-stack MERN application** with Admin, User, and Delivery roles.
- Implemented **JWT, OTP authentication, and RBAC** for secure access.
- Developed core features like **product listing, cart, and Razorpay payment integration**.
- Created **role-based dashboards** for order tracking and management.
- Designed a **responsive UI** and deployed as a desktop app using Electron.js.

❖ Zylo – Real-Time Video Conferencing App

- Built a full-stack real-time video conferencing app with secure video calls, live chat, and meeting history
- Enabled multi-user low-latency audio/video streaming using **WebRTC**
- Added features like real-time chat, screen sharing, and message synchronization
- Implemented secure authentication (token + encrypted passwords) with protected routes
- Managed meeting history storage and retrieval using **MongoDB**
- Handled real-time join/leave events via **Socket.IO**
- Provided in-call controls: mute/unmute, video toggle, and call end

Tech Stack: React.js, Material UI, Node.js, Express.js, MongoDB, WebRTC, Socket.IO

❖ Decentralized File System & NFT Gallery

- Engineered a full-stack **Web3 DApp** for secure, decentralized file storage and digital asset ownership.
- Built a storage pipeline using IPFS + Pinata for reliable and persistent file hosting.
- Developed and deployed smart contracts in Solidity on Ethereum to manage metadata, access control, and ownership.
- Created a responsive frontend with ReactJS and Ethers.js for seamless blockchain interaction.
- Implemented key features: file upload, decentralized storage, secure sharing, and real-time retrieval via IPFS hashing.
- Enabled NFT minting (ERC-721) and ownership transfer with full transaction tracking.
- Integrated MetaMask for authentication and secure transaction signing.
- Ensured data integrity, immutability, and security using blockchain architecture; used Hardhat for development and deployment.

Tech Stack: React.js, IPFS, Pinata, Ether 6, Solidity, Metamask, Hardhat

EDUCATION

- **MSc ICT** | J.P Dawar Department | VNSGU (2025-2027)
- **BCA** | ASSC College | VNSGU CGPA: **7.27** | (2022-2025)
- **XII** | (H.S.C) | MNJ Patel School **81.2%** | 2022
